

# **Typical Features**

- Wide input voltage range 4:1
- High efficiency up to 91%
- Low no-load power consumption
- ◆Operating Temperature:-40°C to +105°C
- High isolation voltage, input-output 3000VAC, input-case 2100VAC
- Protections: input under voltage, output over current, over voltage, short circuit, over temp
- Standard 1/4 brick

**ZCD50-110S15** high efficiency 1/4 brick dc-dc converter, rated input voltage 110VDC, output 15V/50W, no minimum load, ultra wide input 43-160VDC, regulated single output, high isolation insulation voltage, allowing operating temperature up to 105 °C, with input under-voltage protection, output over-current protection, over-voltage protection, over-temperature protection, short-circuit protection, remote control and remote compensation, output voltage regulation and other functions.

### DC/DC Converter 1/4 Brick ZCD50-110S15 Series

#### **Product Characteristic Curve**

Note:

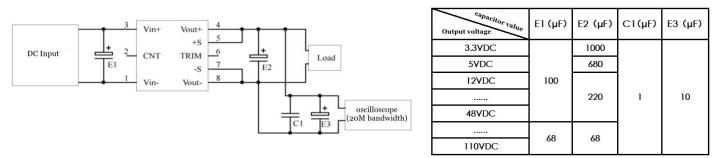

1. Both the temperature derating curve and the efficiency curve are tested with typical values;

2. The temperature derating curve is tested according to our laboratory test conditions. If the actual environmental conditions used by customers are inconsistent, it is necessary to ensure that the temperature of the aluminum casing of the product does not exceed 100 °C, and it can be used within any rated load range.

#### **Design Reference**

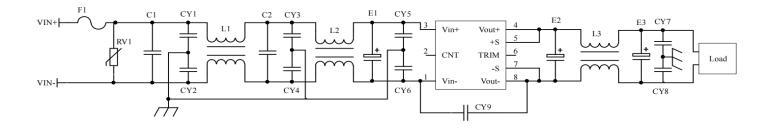

#### 1. Ripple & Noise

All DC/DC converters of this series are tested according to the test circuit recommended in the following figure before leaving the factory.

#### 2. Recommended application circuit

If customer does not use the circuit recommended by our company, please be sure to connect an electrolytic capacitor of at least 100 µF in parallel at the input end to suppress the possible surge voltage at the input end.

Transistor control method

Isolation control method

#### 4. Sense usage and precautions

(1) Without far-end compensation:

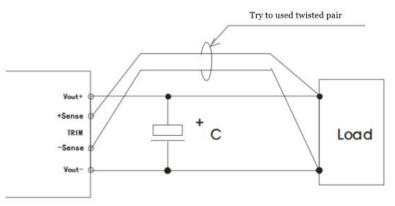

Precautions:

1. Do not use remote compensation, make sure Vout+ and Sense+, Vout- and Sense- are short-circuited;

2. The connection between Vout+ and Sense+, Vout- and Sense- should be as short as possible and close to the pins, otherwise the module may become unstable.

(2) Using remote compensation

Precautions:

1. When the long-end compensation lead is used, the output voltage may be unstable;

2. If remote compensation is used, please use twisted pair or shielded wire, and keep the lead wire as short as possible;

3. Please use wide PCB leads or thick wires between the power module and the load, and keep the line voltage drop below 0.3V to ensure that the power output voltage remains within the specified range;

4. The impedance of the leads may cause the output voltage to oscillate or have larger ripples. Please verify it before use.

## Guangzhou Aipu Electron Technology Co., Ltd

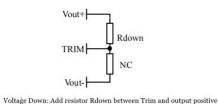

## DC/DC Converter 1/4 Brick ZCD50-110S15 Series

#### 5. Use of TRIM and calculation of TRIM resistance

The relationship between output change voltage  $\triangle U$  and resistance is as follows:

| Vout+ | 7   |
|-------|-----|
|       |     |
| Vout- | Rup |

Voltage up regulation: add resistor Rup between Trim and output negative

Rup=37.5/△U-5.1 (KΩ)

Rdown=15\* (15-2.5-△U) /△U -5.1 (KΩ)

6. This product does not support the use of direct parallel connection to increase the power. If you need to use it in parallel, please consult our technical staff.

#### Others

1 The warranty period of this product is two years. During the normal damage, it will be repaired free of charge. Damages caused by errors in the use method or manufacturing technology, a paid service is provided.

2 Our company can provide product customization and matching filter modules. For details, please contact our technical staff directly.
