

### Typical product features

- ◆ Fixed Voltage Input, Isolated Unregulated Output
- ◆ Conversion efficiency up to 85%
- ◆ Continuous short circuit protection
- ◆ Meet enhanced isolation
- ◆ Small SIP Package
- ◆ Isolation voltage 5000Vac/ 6000Vdc
- ◆ Working temperature: -40°C~+105°C
- ◆ Plastic housing, meet UL94-V0 requirements

**Test conditions:** Unless otherwise specified, all parameters are tested at nominal input voltage, pure resistive rated load and 25°C room temperature.

### Application

**QAXXR3 Series** ----- is a DC-DC module power supply designed for IGBT drivers. It uses an asymmetric voltage output to minimize IGBT drive losses. It also has output short-circuit protection and self-recovery capabilities.

Note: If the pin definitions of the power module are inconsistent with those in the selection manual, the markings on the actual label shall prevail.

### Ripple & Noise Test Instructions (Twisted Pair Method 20MHz Bandwidth)

**Test method:**

- Ripple noise is connected using 12# twisted pair cable, the oscilloscope bandwidth is set to 20MHz, 100M bandwidth probe, and 0.1uF polypropylene capacitor and 10uF high frequency low resistance electrolytic capacitor are connected in parallel on the probe end, and the oscilloscope sampling uses Sample sampling mode.
- Output ripple noise test diagram:

Connect the power input end to the input power supply, and the power output is connected to the electronic load through the fixture board. The test uses a 30cm±2 cm sampling line to directly sample from the power output port. The power line selects the corresponding wire diameter with insulated wire according to the output current.

EMC Recommended Circuit

**Note:**

1. This product cannot be used in parallel and does not support hot plugging;
2. The connection line between the module power supply and the IGBT driver should be as short as possible;
3. The output filter capacitor (low internal resistance electrolytic capacitor) should be close to the module power supply and the IGBT driver;
4. The average output power of the driver must be less than the output power of the power module;
5. It is recommended to use ceramic capacitors or electrolytic capacitors for external capacitors at the input or output of the product. Tantalum capacitors are not recommended, otherwise there will be a certain risk of failure;
6. If the product works below the minimum required load, it cannot be guaranteed that the product performance meets all the performance indicators in this manual;
7. All indicator test methods in this article are based on the company's corporate standards;
8. Product specifications are subject to change without prior notice.
