

**Typical Feature**

- ◆ Fixed Input Voltage, isolated & unregulated, output Power 0.25W
- ◆ Efficiency up to 82%(Typ.)
- ◆ Mini SMD package, international standard pin out
- ◆ Isolation Voltage 1500VDC
- ◆ Operating Temperature: -40°C to +105°C
- ◆ No-load input current as low as 5mA
- ◆ Plastic case with flame class UL94-V0

Test condition: Unless otherwise specified, all the data in this data sheet are tested at rated input voltage and rated load (pure resistance load), ambient temperature 25°C.

**Application Filed**

*This series products are widely used in the fields of instrumentation, communication, pure digital circuits, general low-frequency analog circuits, relay drive circuits and data switching circuits, etc.*

General tolerance:  $\pm 0.25 [0.010]$

Note: Please take the pin definition on the product label as the right one which is different than the one defined in this data sheet.

**Ripple & Noise Test Instructions (Twisted Pair Method, 20MHz Bandwidth)**

1) Ripple noise test need 12# twisted pair cables, an oscilloscope which bandwidth should be set to 20MHz, 0.1uF polypropylene capacitor and 10uF high-frequency low-resistance electrolytic capacitor are connected in parallel with the probes (100M bandwidth). The oscilloscope should be set at the Sample Mode.

2) The output ripple noise test diagram is shown on the right. The converter output connects to the electronic load by the jig with cables which size should be defined according to the output current value. The twisted pair (length 30cm±2 cm) should be connected in parallel with the load, the location is as close as possible to the output pins or terminals. The test can be started after input power on.

**Recommendation for Application**

**1. Requirement for Output load**

The maximum capacitive load of the product was tested at the Rated full load. The converter may not start or be damaged if the capacitor exceeds this value.

**2. Recommended circuit**

To ensure effectively decrease the input and output ripple and noise, a capacitor filter can be connected at the input and output, the application circuit is shown in the figure below. The suitable filter capacitors should be chosen as the recommended capacitive load values in Table 1. The converter could not start if the capacitance is too big.

Recommended capacitive load values (Table 1)

Vin (Vdc)	Cin	Single Vout (Vdc)	Cout (μF)	Dual Vout (Vdc)	Cout (μF)
5	10μF/16V	3.3	10μF/16V	±3.3	4.7μF/16V
12	2.2μF/25V	5	10μF/16V	±5	4.7μF/16V
15	2.2μF/25V	9	2.2μF/25V	±9	2.2μF/25V
24	1μF/50V	12	2.2μF/25V	±12	1μF/25V
--	--	15	1μF/25V	±15	1μF/16V
--	--	24	1μF/50V	±24	0.47μF/50V

### 3. Recommended EMC Circuit

Input voltage		5VDC	12/15/24VDC
EMI	C1/C2	4.7μF/16V	4.7μF/50V
	CY	270pF/2KV	270pF/2KV
	C3	Refer to Cout in Table 1	
	LDM	6.8 μ H	6.8 μ H

### 4. Output voltage regulation and overvoltage protection

The simple solution to achieve the output regulated voltage, over voltage and over current protections is to connect a linear regulator with overheat protection at input or output, and a capacitor filter connected in parallel as below circuit. Filter capacitive value recommended see table 1, Linear regulator should be chosen according to the actual voltage & current for operating. Or Aipu NW series products are recommended instead.
