

### **Typical Features**

- ◆ Wide input voltage range 85-305VAC/120-430VDC
- No load power consumption ≤ 0.25W
- ◆ Efficiency 76%(TYP.)
- ◆ Operating temperature from -40 to +85°C
- ◆ Switching Frequency 65KHz
- Short circuit & over-current protections
- ◆ Isolation voltage 4000VAC
- ◆ Altitude during operation 5000m Max
- ◆ Compliant with IEC/EN62368/UL62368
- ♦ With TUV-CE, CB & UL Certificates
- ◆ PCB DIP mounting

CB

#### **Application Field**

FA5-220SXXG2D4(-T)(-TS) Series ----- Compact size high efficiency modular power supplies with global adapted input voltage range(both AC and DC available), low ripple, low temperature rise, low standby power consumption, high efficiency, high reliability, safety isolated & good EMC performance. This series of products can be widely used in the fields of electric power, industry, instrument and smart home devices, etc. The additional circuit diagram for EMC is recommended in this data sheet for the application with high EMC requirement.

Typical Pro	Typical Product List										
Certificate	Part No.	Outp	out Specificatio	ons	Max Capacitive	Max Ripple & Noise	Efficiency@ Full Load,

Note 1: Please contact Aipu sales for other output voltages requirement in this series but not listed in this table.

Note 2: The typical value of efficiency is based on the product tested after half an hour burn-in at full load.

Note 3: The full load efficiency should be in  $\pm 2\%$  of the typical value in this table. The efficiency is calculated by the way that the full output power is divided by the input power.

Note 4: The suffix -T is for a kind of Chassis package, -TS is for a kind of package of DIN Rail which width is 35mm.

### Ripple & Noise Test Instruction (Twisted Pair Method, 20MHz Bandwidth)

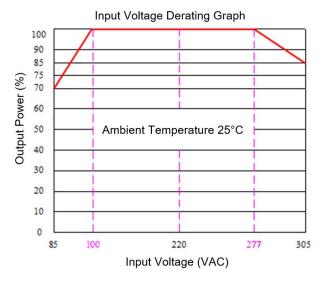

- 1) The Ripple & noise test needs 12# twisted pair cables, an oscilloscope which bandwidth should be set to 20MHz, 0.1uF polypropylene capacitor and 10uF high-frequency low-resistance electrolytic capacitor are connected in parallel with the probes (100M bandwidth). The oscilloscope should be set at the Sample Mode.
- 2) The test diagram is shown on the right. The converter output connects to the electronic load by the jig with cables which size should be defined according to the output current value. The twisted pair (length  $30\text{cm}\pm2\text{ cm}$ ) should be connected in parallel with the load, the location is as close as possible to the output pins or terminals. The test can be start after input power on.

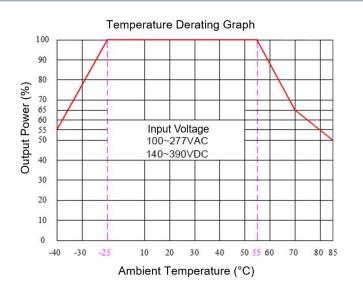

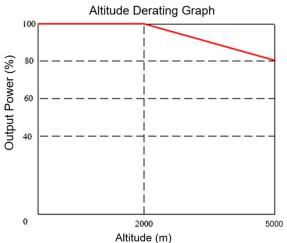

### **Product Characteristics Graphs**

Note 1: The output power should be derated based on the input voltage derating graph at  $85\sim100$ VAC/  $277\sim305$ VAC &  $120\sim140$ VDC/  $390\sim430$ VDC.

Note 2: This product should operate at a natural air condition, please contact us if it need be used at a closed space.

#### **Application Notice**

- 1. The products should be used according to the specifications in this datasheet, otherwise it could be permanently damaged.
- 2. A fuse should be connected at input.
- 3. The product performance in this datasheet cannot be guaranteed if it works at a lower load than the minimum load defined.
- 4. The product performance in this datasheet cannot be guaranteed if it works under over-load condition.
- 5. Unless otherwise specified, all values or indicators in this datasheet are tested at Ta=25°C, humidity<75%RH, nominal input voltage and rated load (pure resistance load).
- 6. All values or indicators in this datasheet had been tested based on Aipupower test specifications.
- 7. The specifications are specially for the parts listed in this datasheet, any other non-standard model performances could be out of the specifications. Please contact our technician for specific requirements.
- 8. Aipupower can provide customization service.
